

CATIZOL CONTAINS:

***YUCCA ROOT**

This herb has steroidal saponins which are used for inflammation, pain, and relief for arthritic and joint pain. The saponins in Yucca are the precursor of natural cortisone normally produced by the adrenal glands. This makes it a popular remedy for all kinds of inflammation, such as arthritis, rheumatism, cystitis, colitis, and other inflammatory conditions. Yucca Root also received additional benefits, such as, migraine relief; it also reduces fever.

***DEVIL'S CLAW**

This herb can relieve pain from arthritis and lower back, knee and hip included. It is also used to treat osteoarthritis, rheumatoid arthritis, tendonitis, soft tissue pain (muscle aches) and nerve pain.

***ETHYL ALCOHOL**

To bring out the properties in the herbs and preserve the tincture.

***DISTILLED WATER**

Care Kits – Contains products specially formulated to help your pet overcome the illnesses they may encounter. These kits include immunity enhancements to give added protection as well as reduce free radicals, both of which are important for optimum health.*

CATIZOL™

Organic

***An aid to help cats manage pain, relieve aches, inflammation and reduce fever**

Catizol™ is an all-natural herbal product designed to help relieve pain in cats. Catizol has Yucca root, which has saponins, which are the precursor of natural cortisone normally produced by the adrenal glands. Yucca root has been clinically proven and effective for migraine relief as well as less pain, stiffness, and swelling in joints.

REFLECTIONS ON ANIMAL PAIN

According to Romyne Gallagher, MD, of med-broad-cast.com. "It turns out that healing is actually de-layed when pain caused by tissue damage is not re-lieved. A number of studies suggest that uncontrolled pain has an adverse effect on our immune system. Continuous pain also appears to lower our body's ability to respond to stressful situations such as sur-gery, chemotherapy, and psychological stress."

The veterinarians at the University of Wisconsin Vet-erinary School are proponents of pain control for pets. They point out that the "benefits include im-proved respiratory functions, decreasing stress re-sponses surrounding surgery, decreased length of hospitalization, faster recover to normal mobility, improved rates of healing and even decreasing the spread of cancer after surgery."

Almost all studies show people and animals return to normal eating and drinking habits sooner when given relief from pain. Therefore prevention, early recogni-tion and aggressive management of pain and anxiety should be essential to veterinary care of small mam-mals. The current approach is to be sensitive to the subtle signs of pain, because the treatment of pain itself can be healing. Pain is stressful and can prolong recovery.
